Top Priorities

1 Create Photo Carousel

"Imagery is more than decoration. It's a powerful tool to help you communicate and differentiate your product. Bold, graphic, and intentional imagery helps to engage the user"

[Google Material Design Style Guide]

2 Design and use JSON to display hotels

JSON will be the main structure in order to gather data from backend. The task requires to use it to only display similar hotels, but I think it's crucial to start using JSON in the page to easily manage the data to display

Medium Priorities

3

Add an interactive location block

A typical user, a tourist, doesn't have a perfect knowledge of what there is around the hotel, but he usually do know about what he want to see in the city.

4

Improve Reviews block

Reviews are crucial in the choosing of the hotel by the user. It's very important to make them readable easily.

Low Priorities

5 Improve the facilities block

The facilities block needs only minor tweaks in order to reduce its space.

6 Improve the room table

Although the room table is one important element to the user, I think that the current one is still perfectly usable.
